A LITTLE ABOUT ME

Currently a student at Coder Academy studying the Web Development Bootcamp. My work background is in technical, electronic and customer service fields. Looking to apply the skills that I have grown throughout my work life into the Web and Software Development fields. A quick learner that isn't afraid of putting in the extra effort to achieve employer's goals and client satisfaction.

# Build Challenges

- ▶ Design process – I had difficulty deciding on a final design for the website. This is the first website that I have designed from scratch (having only followed tutorials/lessons in the past). I'm not sure if designing is my passion, I am looking forward to working with designers and their wireframes in the future
- ▶ Utilizing SASS to full capabilities – Whilst I did make use of some nesting, mix-ins and variables, I feel like there are additional features that I can incorporate into future projects
- ▶ Class & ID Naming – I am still getting my head around building from scratch and I think that I could be more consistent with naming conventions in the future to provide more consistency throughout my websites

# Ethical Issues

- ▶ I found it challenging looking through examples of other portfolio websites and taking inspiration without making my site too similar
- ▶ In the end I think that I have produced a unique portfolio page that expresses my character, but it was a learning experience trying to design original ideas rather than basing it off other websites.

# Favourite Parts

- ▶ I was determined to use a responsive hamburger navbar in my website and am glad I could implement it and learn a little bit of JavaScript whilst doing so
- ▶ I think the rotating carousel of images on the ‘About Me’ page was quite effective at relaying the technologies I am learning in an interactive way to the viewer
- ▶ Learning how to implement multiple CSS pages for global styles as well as page specific styling

Thank you for watching!  
I hope you enjoyed this website  
and presentation!
